

BSI Standards Publication

Hardmetals - Compression test (ISO 4506:2018)

National foreword

This British Standard is the UK implementation of EN ISO 4506:2018. It is identical to ISO 4506:2018. It supersedes BS EN 24506:1993, which is withdrawn.

The UK participation in its preparation was entrusted to Technical Committee ISE/65, Sintered metal components.

A list of organizations represented on this committee can be obtained on request to its secretary.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

Supersedes EN 24506:1993

English Version

Hardmetals - Compression test (ISO 4506:2018)

Métaux durs - Essai de compression (ISO 4506:2018)

Hartmetalle - Druckversuch (ISO 4506:2018)

This European Standard was approved by CEN on 5 April 2018.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and United Kingdom.

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see the following URL: www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 119, *Powder metallurgy*, Subcommittee SC 4, *Sampling and testing methods for hardmetals*.

This second edition cancels and replaces the first edition ([ISO 4506:1979](http://www.iso.org/iso/4506:1979)), which has been technically revised with the following main changes:

- [Clause 2](#) and [Clause 3](#) added;
- [Clause 4](#): “hardmetal” changed to “cemented carbide or pcd (polycrystalline diamond) coated cemented carbide bearing blocks at room temperature”;
- [Clause 5](#): [Table 1](#) revised;
- [Clause 6](#): “hardmetal” changed to “cemented carbide”, hardness changed to “1 800 HV”;
- [8.2.2.2](#): NOTE changed to body text and “or using a laser extensometer” added to end of first sentence;
- [Clause 9](#): “at least five determinations” changed to “at least eight determinations”;
- [Clause 10](#), [Figure 1](#): “pcd” added;
- [Clause 10](#), [Figure 2](#): diameter “16 ± 0,3” changed to “12 ± 0,3”.

Hardmetals - Compression test (ISO 4506:2018)

1 Scope

This document specifies a method of determining the ultimate strength and proof stress of cemented carbide under uniaxial compressive loads.

2 Normative references

There are no normative references in this document.

3 Terms and definitions

No terms and definitions are listed in this document.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- ISO Online browsing platform: available at <https://www.iso.org/obp>
- IEC Electropedia: available at <http://www.electropedia.org/>

4 Principle

Axial loading of a test piece, placed between two cemented carbide or pcd (polycrystalline diamond) coated cemented carbide bearing blocks at room temperature, until the intended deformation occurs or until the test piece fractures.

5 Symbols and designations

[Table 1](#) shows symbols and designations.

Table 1 — Symbols and designations

Symbol	Designation	Unit
S_0	Minimum original cross-sectional area	mm ²
F_c	(With index) Load at proof stress, for example:	
$F_{c0,2}$	Load at 0,2 % proof stress	N
F_{cu}	Ultimate load, i.e. load at instant of fracture	N
R	Stress	N/mm ²
ϵ_c	Strain	%
E	Young's modulus	N/mm ²
R_c	(With index) Proof stress, for example:	
$\sigma_{0,2}$	0,2 % proof stress	N/mm ²
UCS	Ultimate compressive strength	N/mm ²

6 Apparatus

The test machine shall be designed and constructed so that loads can be applied at a uniform rate and so that, within the measuring range in question, the maximum loading error will be ± 1 %.

The test piece shall be affixed between two well-centred and rigidly secured cemented carbide anvils with a hardness not less than 1 800 HV. These contact surfaces shall be perpendicular to the loading axis and parallel to each other within 0,5 $\mu\text{m}/\text{mm}$. An example of a suitable anvil is given in [Figure 1](#).

7 Test piece

7.1 The dimensions of the test piece shall conform to [Figure 2](#). The end faces and the cylindrical surfaces of the enlarged ends shall be ground. Other surfaces should not be ground. (Grinding or polishing may affect the result of the test.)¹⁾

7.2 The minimum diameter of the test piece shall be measured with an accuracy of $\pm 0,02$ mm.

8 Procedure

8.1 Rate of stress increase

The rate at which the load is applied shall be as uniform as possible, and any changes in this rate shall be made gradually and without shock. The rate shall not exceed 8 000 N/s, corresponding approximately to 100 N/($\text{mm}^2 \times \text{s}$).

8.2 Determination of proof stress

8.2.1 The proof stress, for example the 0,2 % proof stress, is determined according to [Figure 3](#). This method is based on the fact, valid for almost all metals, that if a load is removed after the elastic limit, D, has been exceeded, the load-compression curve will follow a linear path that is roughly parallel to the loading curve below the elastic limit.

8.2.2 Determination of proof stress using the graphic intersection method is carried out as follows.

8.2.2.1 Apply a pre-load not greater than that required to keep the test piece positioned properly in the machine.

8.2.2.2 Determine the stress-strain curve.

Because of the shortness of the test zone and the hardness of the material, practical difficulties are involved in measuring changes in length using displacement gauges of the clamp-on type (extensometers) or using a laser extensometer. It is recommended that changes in length be measured using a resistive strain gauge. Two or three gauges should be applied symmetrically at the centre of the test zone. The active length of the gauges should not exceed 8 mm. The results obtained represent an average of the change in length of the test zone.

8.2.2.3 On the graph thus plotted ([Figure 3](#)), make OB equal to the specified residual strain (offset), and draw a line BA from B parallel to OC. Ordinate F_C of intersection point Q has the value F_{Cq} and represents the load that corresponds to the proof stress.

It is sometimes difficult to ascertain the direction of line OC from a graph; in such cases, this line can be drawn on the basis of an agreed value of the Young's modulus.

1) Cylindrical test pieces such as those specified in ASTM E 9 may be used to obtain results with potentially less accuracy.

8.2.3 The proof stress $\sigma_{0,2}$, in newtons per square millimetre, is given by [Formula \(1\)](#):

$$\sigma_{0,2} = \frac{F_{cq}}{S_0} \quad (1)$$

8.3 Determination of ultimate compressive strength

8.3.1 Load the test piece to fracture.

8.3.2 The ultimate compressive strength (UCS), in newtons per square millimetre, is given by [Formula \(2\)](#):

$$\text{UCS} = \frac{F_{cu}}{S_0} \quad (2)$$

9 Expression of results

Report the arithmetical mean of at least eight determinations, rounded to the nearest 10 N/mm².

10 Test report

The test report shall include the following information:

- reference to this document, i.e. ISO 4506;
- all details necessary for identification of the test piece;
- the result obtained;
- all operations not specified by this document, or regarded as optional;
- details of any occurrence which may have affected the result.

British Standards Institution (BSI)

BSI is the national body responsible for preparing British Standards and other standards-related publications, information and services.

BSI is incorporated by Royal Charter. British Standards and other standardization products are published by BSI Standards Limited.

About us

We bring together business, industry, government, consumers, innovators and others to shape their combined experience and expertise into standards-based solutions.

The knowledge embodied in our standards has been carefully assembled in a dependable format and refined through our open consultation process. Organizations of all sizes and across all sectors choose standards to help them achieve their goals.

Information on standards

We can provide you with the knowledge that your organization needs to succeed. Find out more about British Standards by visiting our website at bsigroup.com/standards or contacting our Customer Services team or Knowledge Centre.

Buying standards

You can buy and download PDF versions of BSI publications, including British and adopted European and international standards, through our website at bsigroup.com/shop, where hard copies can also be purchased.

If you need international and foreign standards from other Standards Development Organizations, hard copies can be ordered from our Customer Services team.

Copyright in BSI publications

All the content in BSI publications, including British Standards, is the property of and copyrighted by BSI or some person or entity that owns copyright in the information used (such as the international standardization bodies) and has formally licensed such information to BSI for commercial publication and use.

Save for the provisions below, you may not transfer, share or disseminate any portion of the standard to any other person. You may not adapt, distribute, commercially exploit, or publicly display the standard or any portion thereof in any manner whatsoever without BSI's prior written consent.

Storing and using standards

Standards purchased in soft copy format:

- A British Standard purchased in soft copy format is licensed to a sole named user for personal or internal company use only.
 - The standard may be stored on more than 1 device provided that it is accessible by the sole named user only and that only 1 copy is accessed at any one time.
 - A single paper copy may be printed for personal or internal company use only.
- Standards purchased in hard copy format:
- A British Standard purchased in hard copy format is for personal or internal company use only.
 - It may not be further reproduced – in any format – to create an additional copy. This includes scanning of the document.

If you need more than 1 copy of the document, or if you wish to share the document on an internal network, you can save money by choosing a subscription product (see 'Subscriptions').

Reproducing extracts

For permission to reproduce content from BSI publications contact the BSI Copyright & Licensing team.

Subscriptions

Our range of subscription services are designed to make using standards easier for you. For further information on our subscription products go to bsigroup.com/subscriptions.

With **British Standards Online (BSOL)** you'll have instant access to over 55,000 British and adopted European and international standards from your desktop. It's available 24/7 and is refreshed daily so you'll always be up to date.

You can keep in touch with standards developments and receive substantial discounts on the purchase price of standards, both in single copy and subscription format, by becoming a **BSI Subscribing Member**.

PLUS is an updating service exclusive to BSI Subscribing Members. You will automatically receive the latest hard copy of your standards when they're revised or replaced.

To find out more about becoming a BSI Subscribing Member and the benefits of membership, please visit bsigroup.com/shop.

With a **Multi-User Network Licence (MUNL)** you are able to host standards publications on your intranet. Licences can cover as few or as many users as you wish. With updates supplied as soon as they're available, you can be sure your documentation is current. For further information, email subscriptions@bsigroup.com.

Revisions

Our British Standards and other publications are updated by amendment or revision.

We continually improve the quality of our products and services to benefit your business. If you find an inaccuracy or ambiguity within a British Standard or other BSI publication please inform the Knowledge Centre.
