BSI Standards Publication

Rolling bearings — Radial bearings — Boundary dimensions, general plan

bsi.

...making excellence a habit.TM

National foreword

This British Standard is the UK implementation of ISO 15:2011. It supersedes BS ISO 15:1998 which is withdrawn.

The UK participation in its preparation was entrusted to Technical Committee MCE/7, Rolling bearings.

A list of organizations represented on this committee can be obtained on request to its secretary.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 15 was prepared by Technical Committee ISO/TC 4, Rolling bearings.

This third edition cancels and replaces the second edition (ISO 15:1998), of which it constitutes a minor revision, mainly to update references and terminology.

Introduction

The object of the general plan (this International Standard) is to restrict the number of radial bearing sizes enough to ensure economic production, yet to provide a sufficient number of sizes to satisfy present and future needs of bearing users.

These needs are comprehensive and varying. Therefore, the general plan needs to embrace a wide range of numerically determined sizes and proportions and can even be extended according to the guidelines given in Annex A.

Tapered roller bearings, insert bearings and some types of needle roller bearings and instrument precision bearings standardized by ISO do not conform to this International Standard because the dimensions given are not found to be optimal for the bearings in question.

Rolling bearings — Radial bearings — Boundary dimensions, general plan

1 Scope

This International Standard specifies preferred boundary dimensions for radial bearings of the diameter series 7, 8, 9, 0, 1, 2, 3 and 4.

2 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO 464, Rolling bearings — Radial bearings with locating snap ring — Dimensions and tolerances

ISO 582, Rolling bearings — Chamfer dimensions — Maximum values

ISO 5593, Rolling bearings — Vocabulary

ISO 12043, Rolling bearings — Single-row cylindrical roller bearings — Chamfer dimensions for loose rib and non-rib sides

ISO 12044, Rolling bearings — Single-row angular contact ball bearings — Chamfer dimensions for outer ring non-thrust side

ISO 15241, Rolling bearings — Symbols for quantities

3 Terms and definitions

For the purposes of this document, the terms and definitions given in ISO 5593 apply.

4 Symbols

For the purposes of this document, the symbols given in ISO 15241 and the following apply.

The symbols shown in Figure 1 and given in Tables 1 to 8 denote nominal dimensions, unless specified otherwise.

B bearing width

D bearing outside diameter

d bearing bore diameter

r chamfer dimension

$r_{s\ min}$ smallest single chamfer dimension

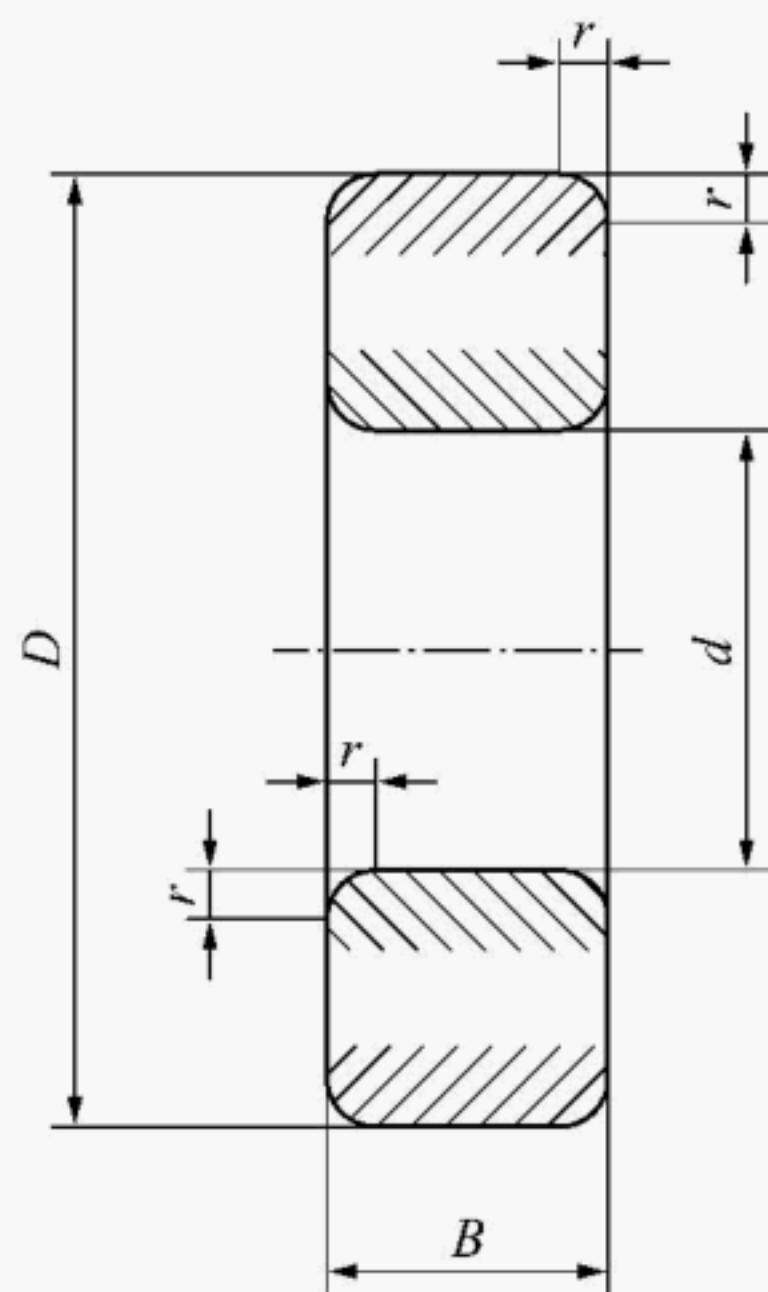

Figure 1 — Radial bearing

5 Boundary dimensions

Boundary dimensions for radial bearings of the diameter series 7, 8, 9, 0, 1, 2, 3 and 4 are given in Tables 1 to 8.

The chamfer dimensions given in Tables 1 to 8 do not always apply to:

- the groove side of bearing rings with snap ring groove; these are specified in ISO 464;
- the loose rib and the non-rib sides of cylindrical roller bearing rings; the exceptions are specified in ISO 12043;
- the non-thrust side of angular contact bearing outer rings; these are specified in ISO 12044.

Chamfer dimension, r , applies at the corners indicated in Figure 1 and is specified with $r_{s\ min}$ in Tables 1 to 8.

The chamfer dimensions for inner rings of bearings with tapered bore may be smaller than those shown in Tables 1 to 8.

The corresponding largest single chamfer dimensions to the $r_{s\ min}$ dimensions in Tables 1 to 8 are given in ISO 582.

Annex A (informative)

Guidelines for the extension of this International Standard for radial bearings

A.1 General

For any new dimension not numerically determined in this International Standard, the following guidelines should be used. The equations given for outside diameter and width should not, however, be used for definite determination of the boundary dimension values; they may often need to be modified in order to maintain the continuity of this International Standard to obtain suitable bearing proportions, and to permit the selection of preferred dimensions.

Accordingly, it is intended that any new dimensions be approved by future revisions of this International Standard.

A.2 Bearing bore diameters

Bearing bore diameters, d , of inner rings, above 500 mm, should be selected from the R 40 series of preferred numbers given in ISO 3.

Bearing bore diameters already appearing in this International Standard should be chosen for preference.

A.3 Bearing outside diameters

Bearing outside diameters, D , of outer rings should be calculated, in millimetres, from Equation (A.1):

$$D = d + f_D \frac{d}{D} \quad (A.1)$$

where the factor, f_D , has the appropriate value given in Table A.1.

Diameter series	Values of f_D							
	7	8	9	0	1	2	3	4
f_D	0,34	0,45	0,62	0,84	1,12	1,40	1,92	2,56

Bearing outside diameter dimensions already appearing in this International Standard should be chosen for preference.

New bearing outside diameter dimensions should be rounded as shown in Table A.2.

Table A.2 — Rounding for D
Dimensions in millimetres

D	u	Rounded to the nearest
>		
—	3	0,5
3	80	1
80	230	5
230	—	10

A.4 Bearing widths

Bearing widths, B, should be calculated, in millimetres, from Equation (A.2):

$$B = f_B(D - d) \quad (A.2)$$

where the factor, f_B , has the appropriate value given in Table A.3.

Table A.3 — Values of f_B

Width series	0	1	2	3	4	5	6	7
f_B	0,64	0,88	1,15	1,5	2	2,7	3,6	4,8

New bearing width dimensions should be selected from the R 80 series of preferred numbers given in ISO 3 and rounded as shown in Table A.4.

Table A.4 — Rounding for B

Dimensions in millimetres

B	u	Rounded to the nearest
>		
—	3	0,1
3	4	0,5
4	500	1
500	—	5

A.5 Smallest single chamfer dimension

Smallest single chamfer dimension, $r_{s\ min}$, should be selected from the $r_{s\ min}$ values listed in Table 1 of ISO 582:1995 and, in principle, be that value which is nearest to, but not larger than the smaller of the two values: 7 % of the bearing width, B, and 7 % of the sectional height $(D - d)/2$.

British Standards Institution (BSI)

BSI is the national body responsible for preparing British Standards and other standards-related publications, information and services.

BSI is incorporated by Royal Charter. British Standards and other standardization products are published by BSI Standards Limited.

About us

We bring together business, industry, government, consumers, innovators and others to shape their combined experience and expertise into standards-based solutions.

The knowledge embodied in our standards has been carefully assembled in a dependable format and refined through our open consultation process. Organizations of all sizes and across all sectors choose standards to help them achieve their goals.

Information on standards

We can provide you with the knowledge that your organization needs to succeed. Find out more about British Standards by visiting our website at bsigroup.com/standards or contacting our Customer Services team or Knowledge Centre.

Buying standards

You can buy and download PDF versions of BSI publications, including British and adopted European and international standards, through our website at bsigroup.com/shop, where hard copies can also be purchased.

If you need international and foreign standards from other Standards Development Organizations, hard copies can be ordered from our Customer Services team.

Subscriptions

Our range of subscription services are designed to make using standards easier for you. For further information on our subscription products go to bsigroup.com/subscriptions.

With British Standards Online (BSOL) you'll have instant access to over 55,000 British and adopted European and international standards from your desktop. It's available 24/7 and is refreshed daily so you'll always be up to date.

You can keep in touch with standards developments and receive substantial discounts on the purchase price of standards, both in single copy and subscription format, by becoming a BSI Subscribing Member.

PLUS is an updating service exclusive to BSI Subscribing Members. You will automatically receive the latest hard copy of your standards when they're revised or replaced.

To find out more about becoming a BSI Subscribing Member and the benefits of membership, please visit bsigroup.com/shop.

With a Multi-User Network Licence (MUNL) you are able to host standards publications on your intranet. Licences can cover as few or as many users as you wish. With updates supplied as soon as they're available, you can be sure your documentation is current. For further information, email bsmusales@bsigroup.com.

BSI Group Headquarters

389 Chiswick High Road London W4 4AL UK

Revisions

Our British Standards and other publications are updated by amendment or revision.

We continually improve the quality of our products and services to benefit your business. If you find an inaccuracy or ambiguity within a British Standard or other BSI publication please inform the Knowledge Centre.

Copyright

All the data, software and documentation set out in all British Standards and other BSI publications are the property of and copyrighted by BSI, or some person or entity that owns copyright in the information used (such as the international standardization bodies) and has formally licensed such information to BSI for commercial publication and use. Except as permitted under the Copyright, Designs and Patents Act 1988 no extract may be reproduced, stored in a retrieval system or transmitted in any form or by any means – electronic, photocopying, recording or otherwise – without prior written permission from BSI.
