BSI Standards Publication

Rolling bearings — Cast and pressed housings for insert bearings — Boundary dimensions and tolerances

bsi.

...making excellence a habit.TM

National foreword

This British Standard is the UK implementation of ISO 3228:2013. It supersedes BS 6010-3:1994 which is withdrawn.

The UK participation in its preparation was entrusted to Technical Committee MCE/7, Rolling bearings.

A list of organizations represented on this committee can be obtained on request to its secretary.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 3228 was prepared by Technical Committee ISO/TC 4, *Rolling bearings*, Subcommittee SC 6, *Insert bearings*.

This fourth edition cancels and replaces the third edition (ISO 3228:1993), which has been technically revised. In particular, this fourth edition has been extended. Boundary dimensions and tolerances of cast housings for diameter series 3 have been added in [Tables 2, 4, 6](#) and [8](#). In addition, boundary dimensions and tolerances of larger size cast flanged housings, oval and cast take-up housings for diameter series 2 have been added in [Tables 5](#) and [7](#).

Rolling bearings — Cast and pressed housings for insert bearings — Boundary dimensions and tolerances

1 Scope

This International Standard specifies boundary dimensions and tolerances for cast and pressed housings for insert bearings for which boundary dimensions are given in ISO 9628[[1](#)].

It applies to plummer block housings, flanged housings and take-up housings.

The inclusion of relubrication features is optional, but when provided it is intended that they intersect the zone specified in ISO 9628[[1](#)] in such a way that lubricant satisfactorily feeds from the housing through this zone. The exact design of the relubrication features is not otherwise covered by this International Standard.

2 Normative references

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO 5593, *Rolling bearings — Vocabulary*

ISO 15241, *Rolling bearings — Symbols for quantities*

3 Terms and definitions

For the purposes of this document, the terms and definitions given in ISO 5593 apply.

4 Symbols

4.1 General

For the purposes of this document, the symbols given in ISO 15241 and those in [4.2](#) to [4.7](#) apply.

The symbols (except those for tolerances) shown in [Figures 1](#) to [6](#), and the values given in [Tables 1](#) to [10](#) denote nominal dimensions, unless specified otherwise.

NOTE [Figures 1](#) to [6](#) are drawn schematically and do not necessarily show all design details. The grease nipple positions in [Figures 1](#) to [4](#) are examples. Other positions are at the discretion of the manufacturer.

4.2 Cast plummer block housing

See [Figure 1](#) and [Tables 1](#) and [2](#).

A	(overall) width of base
D_a	spherical seating diameter of housing
H	distance from mounting base to centreline of spherical seating diameter
H_1	height of feet
J	centre distance between bolt holes
L	(overall) length of base
N	width of bolt hole
N_1	length of bolt hole
Δ_{Hs}	deviation of single distance from mounting base to centreline of spherical seating diameter

4.3 Cast flanged housing, square

See [Figure 2](#) and [Tables 3](#) and [4](#).

A	(overall) width
A_1	width of flange
A_2	distance from mounting face to centreline of spherical seating diameter
D_a	spherical seating diameter of housing
J	centre distance between bolt holes
L	(overall) length
N	diameter of bolt hole
X	position tolerance of bolt holes
Δ_{A2s}	deviation of single distance from mounting face to centreline of spherical seating diameter

4.4 Cast flanged housing, oval

See [Figure 3](#) and [Tables 5](#) and [6](#).

A	(overall) width
A_1	width of flange
A_2	distance from mounting face to centreline of spherical seating diameter
D_a	spherical seating diameter of housing
H	height of flange

<i>J</i>	centre distance between bolt holes
<i>L</i>	(overall) length
<i>N</i>	diameter of bolt hole
<i>X</i>	position tolerance of bolt holes
Δ_{A2s}	deviation of single distance from mounting face to centreline of spherical seating diameter

4.5 Cast take-up housing

See [Figure 4](#) and [Tables 7](#) and [8](#).

<i>A</i>	(overall) width (attachment end)
<i>A</i> ₁	width of location slot
<i>A</i> ₂	width of flange in which location slot is provided
<i>D</i> _a	spherical seating diameter of housing
<i>H</i>	(overall) height
<i>H</i> ₁	distance between bottoms of location slots
<i>H</i> ₂	height (attachment end)
<i>L</i>	(overall) length
<i>L</i> ₁	distance from attachment end face to centreline of spherical seating diameter
<i>L</i> ₂	length (attachment end)
<i>L</i> ₃	length of location slot
<i>N</i>	diameter of attachment hole
<i>N</i> ₁	length of attachment slot
<i>N</i> ₂	height of attachment slot
Δ_{H1s}	deviation of single distance between bottoms of location slots

4.6 Pressed plummer block housing

See [Figure 5](#) and [Table 9](#).

<i>A</i>	(overall) width of base
<i>D</i> _a	spherical seating diameter of housing
<i>H</i>	distance from mounting base to centreline of spherical seating diameter
<i>H</i> ₁	height of feet
<i>J</i>	centre distance between bolt holes
<i>L</i>	(overall) length of base

N	diameter of bolt hole
Δ_{Js}	deviation of single centre distance between bolt holes
Δ_{Ns}	deviation of single diameter of bolt hole

4.7 Pressed flanged housings, round, triangular and oval

See [Figure 6](#) and [Table 10](#).

A	(overall) width
A_1	width of flange
D_a	spherical seating diameter of housing
H	height (round, triangular, oval)
H_1	distance from straight edge to centreline of spherical seating diameter (triangular)
H_2	limit diameter of flat surface
J	pitch circle diameter of bolt holes (round and triangular); centre distance between bolt holes (oval)
L	(overall) length of flange (oval)
N	side dimension of square bolt hole
Δ_{Js}	deviation of single pitch circle diameter of bolt holes (round and triangular); deviation of single centre distance between bolt holes (oval)
Δ_{Ns}	deviation of single side dimension of square bolt hole

5 Boundary dimensions and tolerances

5.1 General

Boundary dimensions and tolerances are given in [Tables 1](#) to [10](#).

Where “max.” is shown in [Tables 1](#) to [10](#), this indicates that the value is both the nominal value and the largest actual value permitted. Where “min.” is shown in [Tables 1](#) to [8](#), this indicates that the value is both the nominal value and the smallest actual value permitted.

5.2 Cast housings

Boundary dimensions and tolerances for cast housings are given in [Tables 1](#) to [8](#).

Key

1 limit of flat surface

a The holes may alternatively be round with diameter equal to N .

b Housings with $D_a \geq 80$ mm have four bolt holes.

British Standards Institution (BSI)

BSI is the national body responsible for preparing British Standards and other standards-related publications, information and services.

BSI is incorporated by Royal Charter. British Standards and other standardization products are published by BSI Standards Limited.

About us

We bring together business, industry, government, consumers, innovators and others to shape their combined experience and expertise into standards-based solutions.

The knowledge embodied in our standards has been carefully assembled in a dependable format and refined through our open consultation process. Organizations of all sizes and across all sectors choose standards to help them achieve their goals.

Information on standards

We can provide you with the knowledge that your organization needs to succeed. Find out more about British Standards by visiting our website at bsigroup.com/standards or contacting our Customer Services team or Knowledge Centre.

Buying standards

You can buy and download PDF versions of BSI publications, including British and adopted European and international standards, through our website at bsigroup.com/shop, where hard copies can also be purchased.

If you need international and foreign standards from other Standards Development Organizations, hard copies can be ordered from our Customer Services team.

Subscriptions

Our range of subscription services are designed to make using standards easier for you. For further information on our subscription products go to bsigroup.com/subscriptions.

With British Standards Online (BSOL) you'll have instant access to over 55,000 British and adopted European and international standards from your desktop. It's available 24/7 and is refreshed daily so you'll always be up to date.

You can keep in touch with standards developments and receive substantial discounts on the purchase price of standards, both in single copy and subscription format, by becoming a BSI Subscribing Member.

PLUS is an updating service exclusive to BSI Subscribing Members. You will automatically receive the latest hard copy of your standards when they're revised or replaced.

To find out more about becoming a BSI Subscribing Member and the benefits of membership, please visit bsigroup.com/shop.

With a Multi-User Network Licence (MUNL) you are able to host standards publications on your intranet. Licences can cover as few or as many users as you wish. With updates supplied as soon as they're available, you can be sure your documentation is current. For further information, email bsmusales@bsigroup.com.

BSI Group Headquarters

389 Chiswick High Road London W4 4AL UK

Revisions

Our British Standards and other publications are updated by amendment or revision.

We continually improve the quality of our products and services to benefit your business. If you find an inaccuracy or ambiguity within a British Standard or other BSI publication please inform the Knowledge Centre.

Copyright

All the data, software and documentation set out in all British Standards and other BSI publications are the property of and copyrighted by BSI, or some person or entity that owns copyright in the information used (such as the international standardization bodies) and has formally licensed such information to BSI for commercial publication and use. Except as permitted under the Copyright, Designs and Patents Act 1988 no extract may be reproduced, stored in a retrieval system or transmitted in any form or by any means – electronic, photocopying, recording or otherwise – without prior written permission from BSI.
