Securities and related financial instruments — Classification of financial instruments (CFI) code

National foreword

This British Standard is the UK implementation of ISO 10962:2021. It supersedes BS ISO 10962:2019, which is withdrawn.

The UK participation in its preparation was entrusted to Technical Committee IST/12, Financial services.

A list of organizations represented on this committee can be obtained on request to its committee manager.

Contractual and legal considerations

This publication has been prepared in good faith, however no representation, warranty, assurance or undertaking (express or implied) is or will be made, and no responsibility or liability is or will be accepted by BSI in relation to the adequacy, accuracy, completeness or reasonableness of this publication. All and any such responsibility and liability is expressly disclaimed to the full extent permitted by the law.

This publication is provided as is, and is to be used at the recipient's own risk.

The recipient is advised to consider seeking professional guidance with respect to its use of this publication.

This publication is not intended to constitute a contract. Users are responsible for its correct application.

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 68, *Financial services*, Subcommittee SC 8, *Reference data for financial services*.

This fifth edition cancels and replaces the fourth edition (ISO 10962:2019), which has been technically revised. The six-character hierarchical structure remains unchanged from the previous version.

The main changes to the previous edition are as follows:

- The CFI code list has been removed from the specification and moved to an external code list.
- The structure of the CFI and content of the code list are captured in the form of a machine-readable semantical model of the code lists and their values. It is important to understand that this is a semantic representation of the CFI hierarchical structure and not a canonical semantic classification of financial instruments, which is beyond the scope of this document.
- The CFI external code list is maintained and published by the ISO 10962 maintenance agency, which is responsible for managing the modification and enhancement of the code lists, their values and corresponding descriptions. The maintenance agency is responsible for publishing the CFI code list. The CFI external code list is published in a selection of human-readable and machine-readable data formats [e.g. spreadsheet, PDF, comma-separated values (CSV), JSON-LD, TTL] at the discretion of the maintenance agency. See https://www.iso.org/maintenance_agencies.html#81140.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.

Introduction

The classification of financial instruments (CFI) code was developed to address several problems that concerned the financial community. With the growth of cross-border trading, the requirement to improve communication of information among market participants had become critical.

The business problems centred around an inability to obtain information on financial instruments due to the lack of a consistent and uniform approach to grouping financial instruments. With the explosive growth over the previous 20 years in new instruments and features attached to financial instruments, a serious communication problem had developed.

Many market participants were using similar terminology for instruments having significantly different features. This problem was compounded when market participants looked beyond their own national markets where they encountered the same words used to describe instruments with significantly different features. Where the terminology was in a different language, market participants encountered additional problems of translation, which can also be misleading.

In addition, the customs and practices of local markets varied considerably in how they structured financial instruments, often leaving foreign participants perplexed. On careful analysis, it was often found that the characteristics and features of these instruments were similar to domestic instruments. However, most market participants did not have the time and resources to do this analysis.

The inability to group financial instruments in a consistent manner was another problem encountered by market participants. Reports of holdings by different sources for similar financial instruments often resulted in those instruments being categorized differently. This not only affected comparability but caused a credibility issue with the reader. When relative performance is measured, the ability to properly categorize holdings is essential if true comparisons are to be made.

A twofold solution was developed to address these problems. One was to establish a series of codes that classify financial instruments having similar features. The other was to develop a glossary of terms and provide common definitions that allow market participants to easily understand the terminology being used.

The benefits derived are many:

- The CFI code system provides a set of codes for financial instruments that can be used globally for straight-through processing by all involved participants in an electronic data processing environment. For example, readers of portfolio holdings see reports from different sources using the same categories, groups and attributes, making the comparison of instruments more credible.
- The use of these codes increases the efficiency, reliability, data consistency and transparency of financial services transactions for both market and reference data. Classifying financial instruments in a consistent, structured and standardized way is also beneficial for regulatory reporting requirements.
- The broadened scope and coverage of CFI codes encourages market participants to take advantage of other International Standards, particularly international securities identification numbers (ISINs).
- It is intended that the improved understanding of the characteristics and categorization leads to a better understanding of financial instruments. This leads to more active markets and improved market liquidity. In addition, these codes are displayed on websites using internet technology, which has allowed the growth of e-issuing, e-trading and e-settlements.
- The CFI code system can further serve as a basis for the classification of financial instruments for industry risk aggregation and regulatory reporting.

The International Organization for Standardization (ISO) draws attention to the fact that it is claimed that compliance with this document may involve the use of a patent.

ISO takes no position concerning the evidence, validity and scope of this patent right.

The holder of this patent right has assured ISO that he or she is willing to negotiate licences under reasonable and non-discriminatory terms and conditions with applicants throughout the world. In this respect, the statement of the holder of this patent right is registered with ISO. Information may be obtained from the patent database available at www.iso.org/patents.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights other than those in the patent database. ISO shall not be held responsible for identifying any or all such patent rights.

Securities and related financial instruments — Classification of financial instruments (CFI) code

1 Scope

This document defines and describes the structure for the codes for an internationally valid system to classify financial instruments. The classification system applies to financial instruments negotiated internationally as well as to domestic instruments. The term “financial instruments” refers not only to classical securities and derivatives but also covers the innovative financial products that have emerged in different markets (a trend that is expected to continue in the future).

This document is intended for use in any application in the trading and administration of financial instruments in the international securities business. Insofar as the trading and administration of securities do not affect other countries, the application of this document remains at the discretion of the responsible national bodies, such as stock exchanges, banks, brokers, regulatory bodies and other institutions active in the securities field.

In principle, the CFI code reflects characteristics that are defined when a financial instrument is issued and that remain unchanged during its entire lifetime. However, a few events that can lead to a new CFI code for the same instrument are anticipated, such as the changing of voting rights or ownership restrictions by a stockholders' meeting.

2 Normative references

There are no normative references in this document.

3 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- ISO Online browsing platform: available at <https://www.iso.org/obp>
- IEC Electropedia: available at <http://www.electropedia.org/>

3.1 concept

unit thought, idea or meaning

Note 1 to entry: A concept uses an *Internationalized Resource Identifier* (3.2) as a unique identifier.

3.2 Internationalized Resource Identifier IRI

unique string of characters to identify a *concept* (3.1)

Note 1 to entry: The IRI supersedes the universal resource identifier (URI) for use in identifying concepts within a *Resource Definition Framework* (3.3).

3.3 Resource Definition Framework RDF

general method used to model *concepts* (3.1)

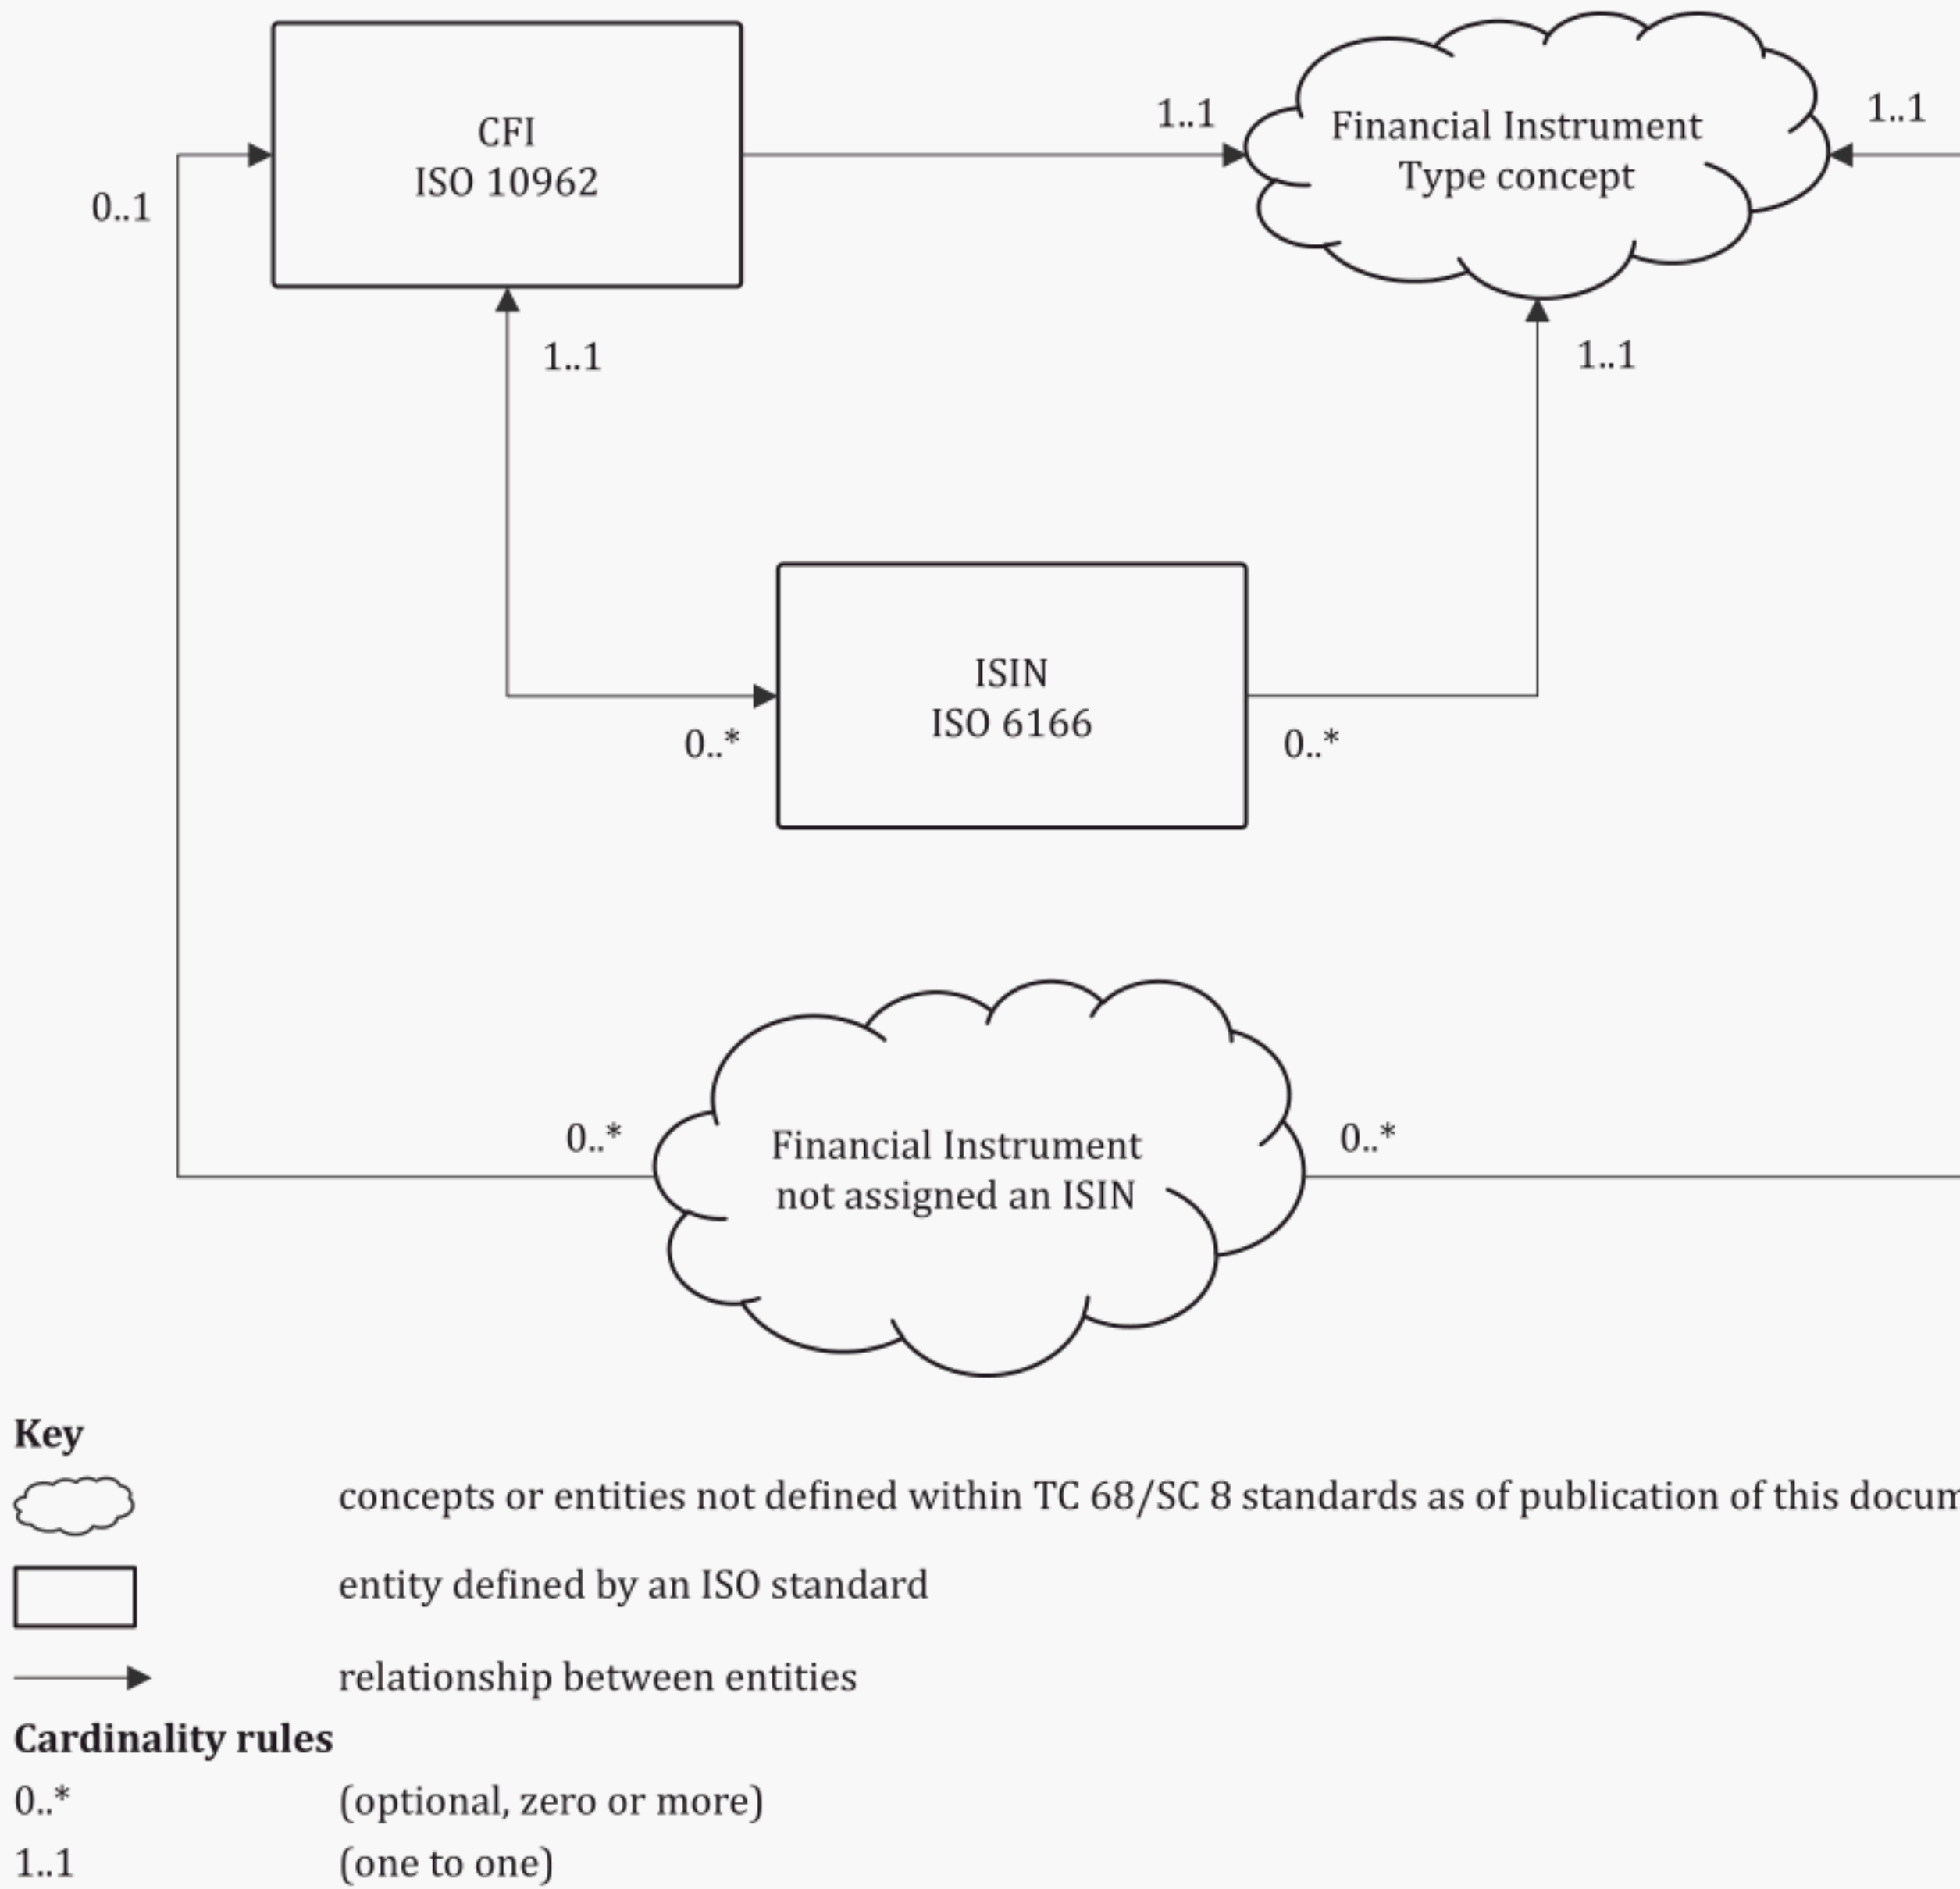

Figure 1 — Entity relationship

The CFI code is composed of six alphabetic characters where each character position has special significance. The structure can be summarized as follows (detailed descriptions are provided in the following subclauses):

- The first character represents the Category of the instrument.
- The second character represents the Group within a given Category.
- The third to the sixth characters are attributes which are defined to be significant within the context of a given Category and Group.

The alphabetic characters A, B, C, D, E, F, G, H, I, J, K, L, M, N, O, P, Q, R, S, T, U, V, W, X, Y and Z are available for assignment. Two alphabetic characters have special meanings and cannot be redefined:

- X Not applicable or undefined: the character 'X' may be used for any respective Attribute if the information is unknown, not available or applicable at the time of assignment, regardless of whether it is stated as an available character for the Attribute and should be updated to reflect the respective Attribute as soon as it is known or available.
- The character 'X' shall not be used as a value in this manner for Category or Group.
- M Others (miscellaneous): the character 'M' exclusively represents 'Others (miscellaneous)' and may only be used where it is available as a character within the context of its parent category or group. 'M' is only to be selected when the Category, Group or Attribute being classified shall not be attributed to an existing specified Category, Group or Attribute.

The meaning of an alphabetic character is local to, and only valid within, the context of its parent category or its group.

Refer to [Annex A](#) for an example.

4.2 Category

The first character indicates the highest level of classification, the Category, which describes the broad asset classes of the instrument, such as debt, equities, listed options, referential instruments or swaps.

4.3 Group

The second character indicates specific Groups within each category. For example, equities are broken down into groups such as common or ordinary shares, preferred or preference shares, and common or ordinary convertible shares. Within the category of debt instruments, groups include bonds and convertible bonds.

For the complete classification breakdown covering all categories, see https://www.iso.org/maintenance_agencies.html#81140.

4.4 Attributes

The last four characters indicate the most relevant attributes applicable to each group within a category. Whereas voting rights, ownership, transfer or sales restrictions, payment status and form are useful information in equities, these features do not exist for options, which have other attributes such as option style, underlying assets, delivery, standardized or non-standardized, or trigger. The position of the four attributes among them do not represent a hierarchical structure within the instrument group.

4.5 Semantic model of the external code list for the CFI

The metamodel for the CFI consists of a specification of each type of CFI component (e.g. Category, Group, First Attribute) as well as the metadata that is attached to each of those components. The annotations function to describe the elements (e.g. provide the definition) as well as to specify certain administrative facts associated with the item (e.g. whether the item has been deprecated), see [Figure 2](#).

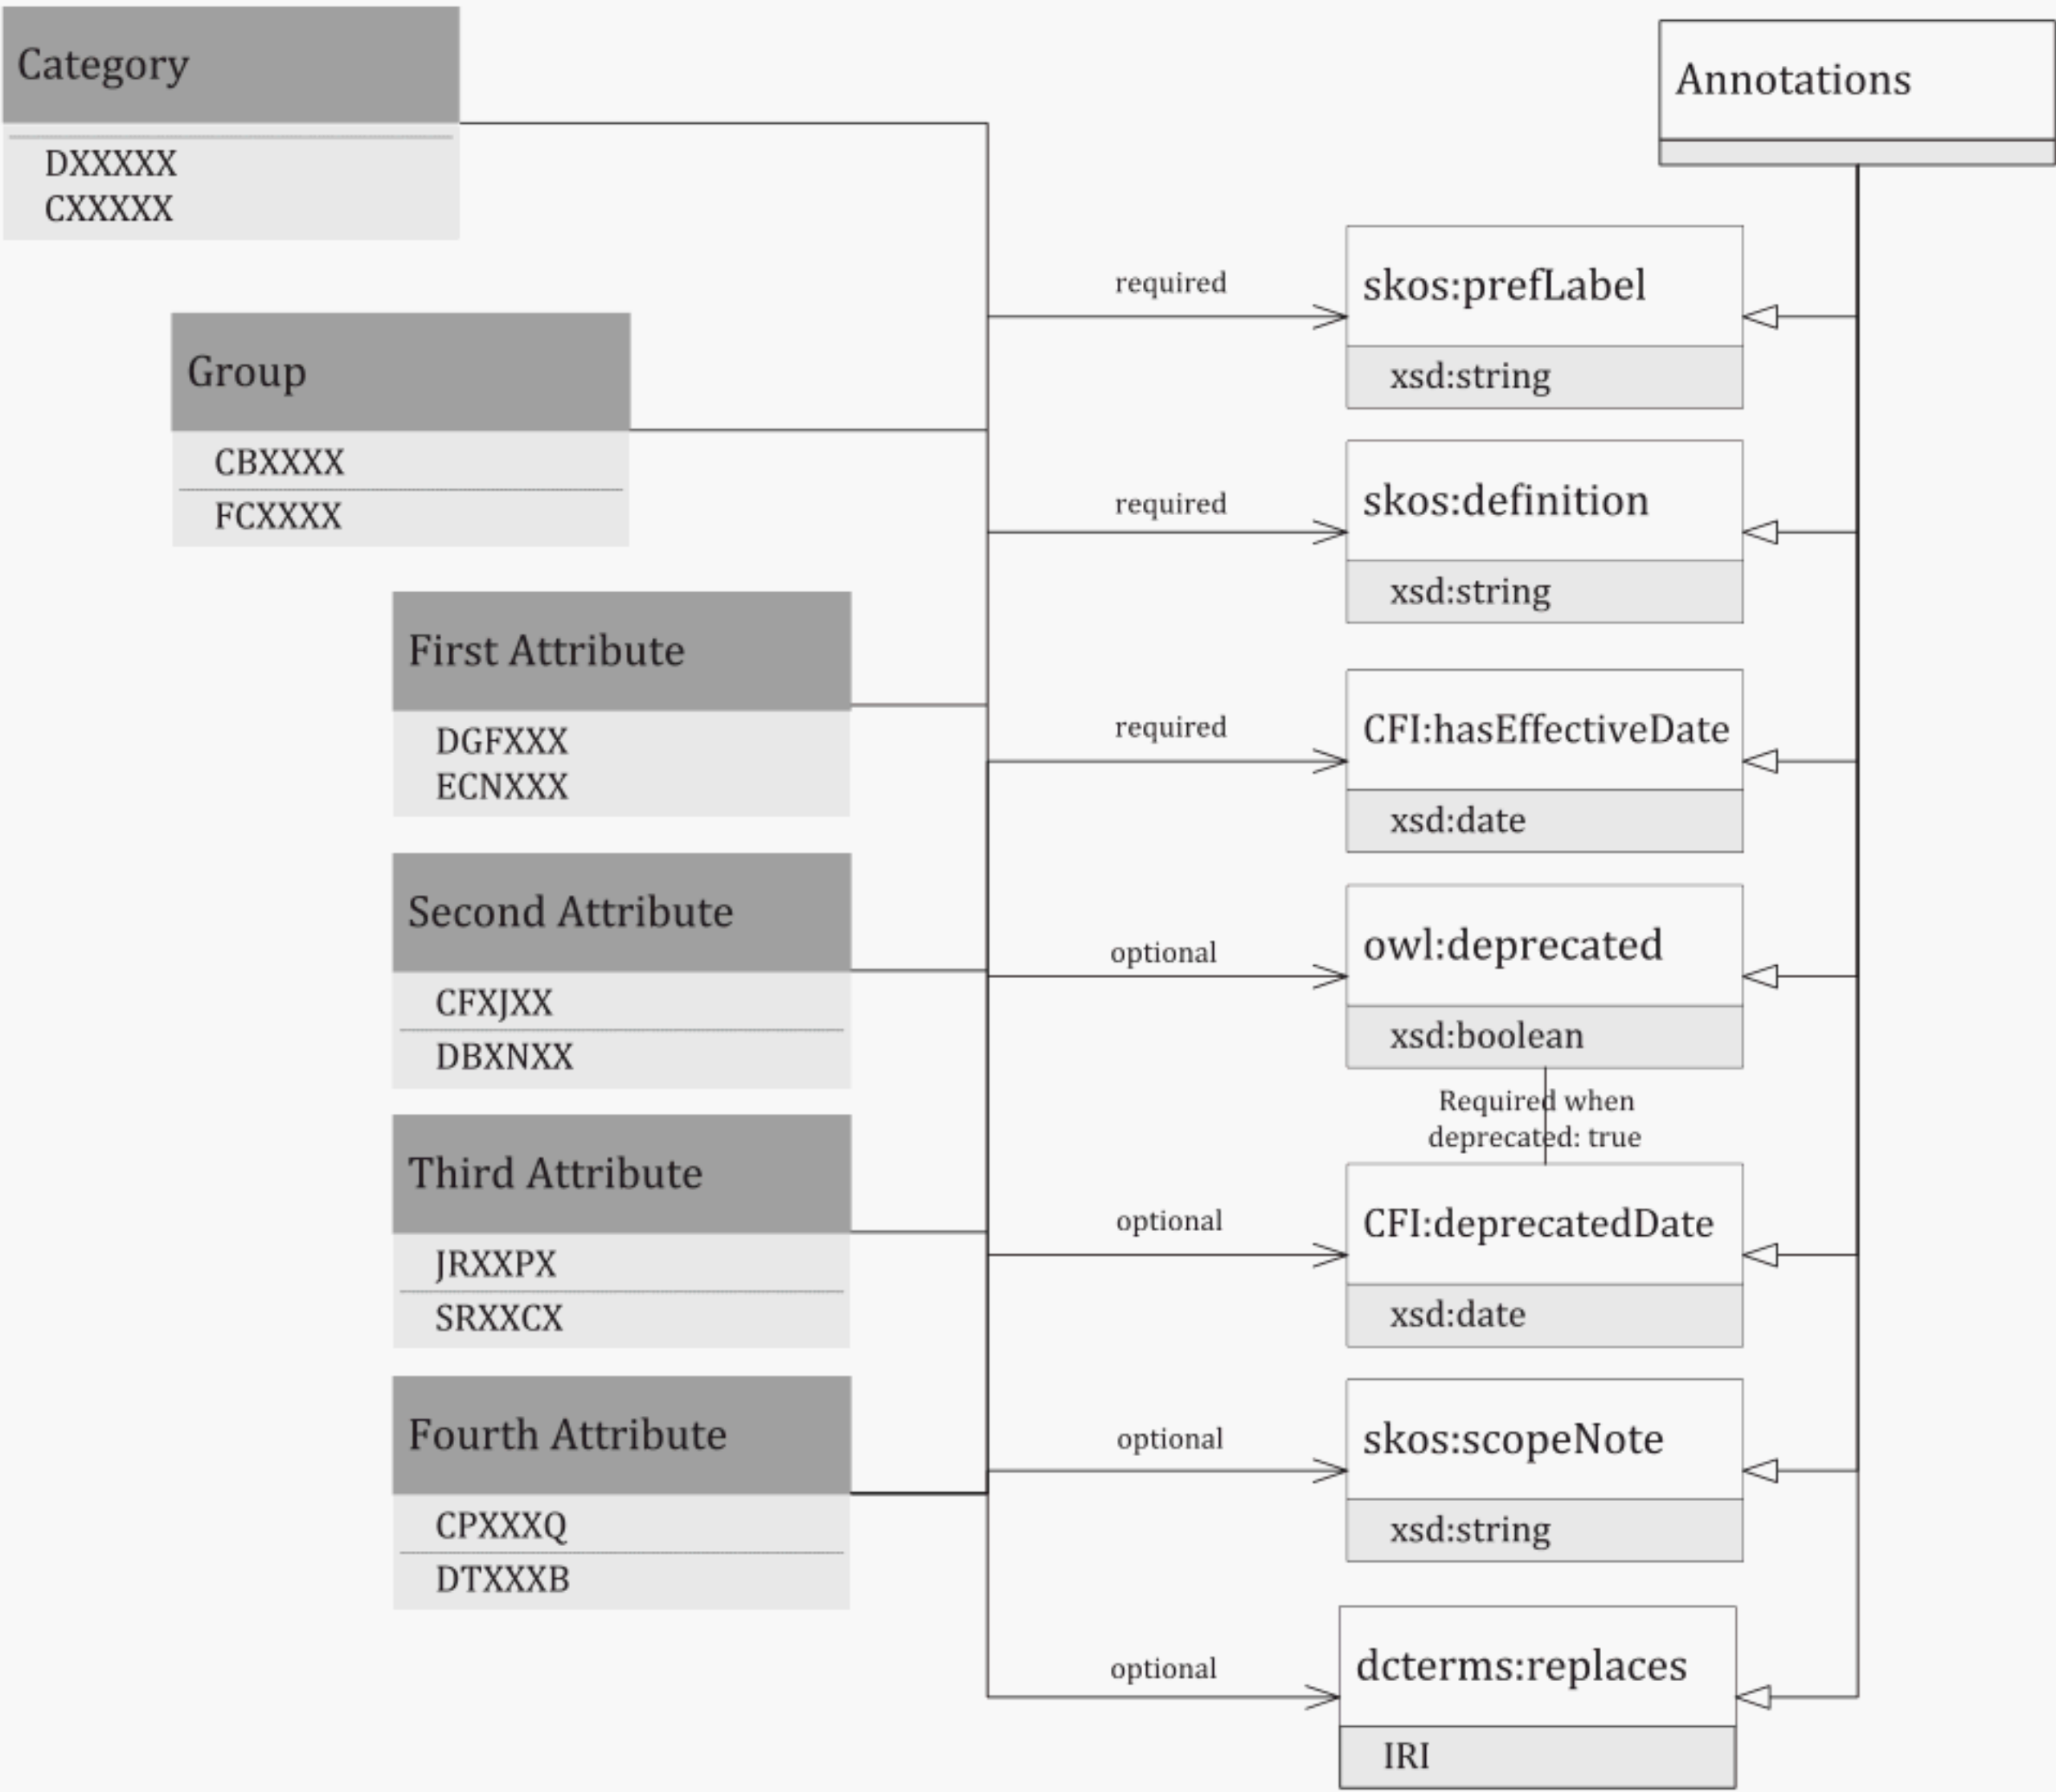

Figure 2 — CFI metamodel

In each case, the individual value specified will be both a skos:Concept and owl:NamedIndividual. The key relationship in each instance will be specified with skos:broader where the relevant individual that is a member of the more general class is specified. Visually, the model is structured as shown in [Figure 3](#).

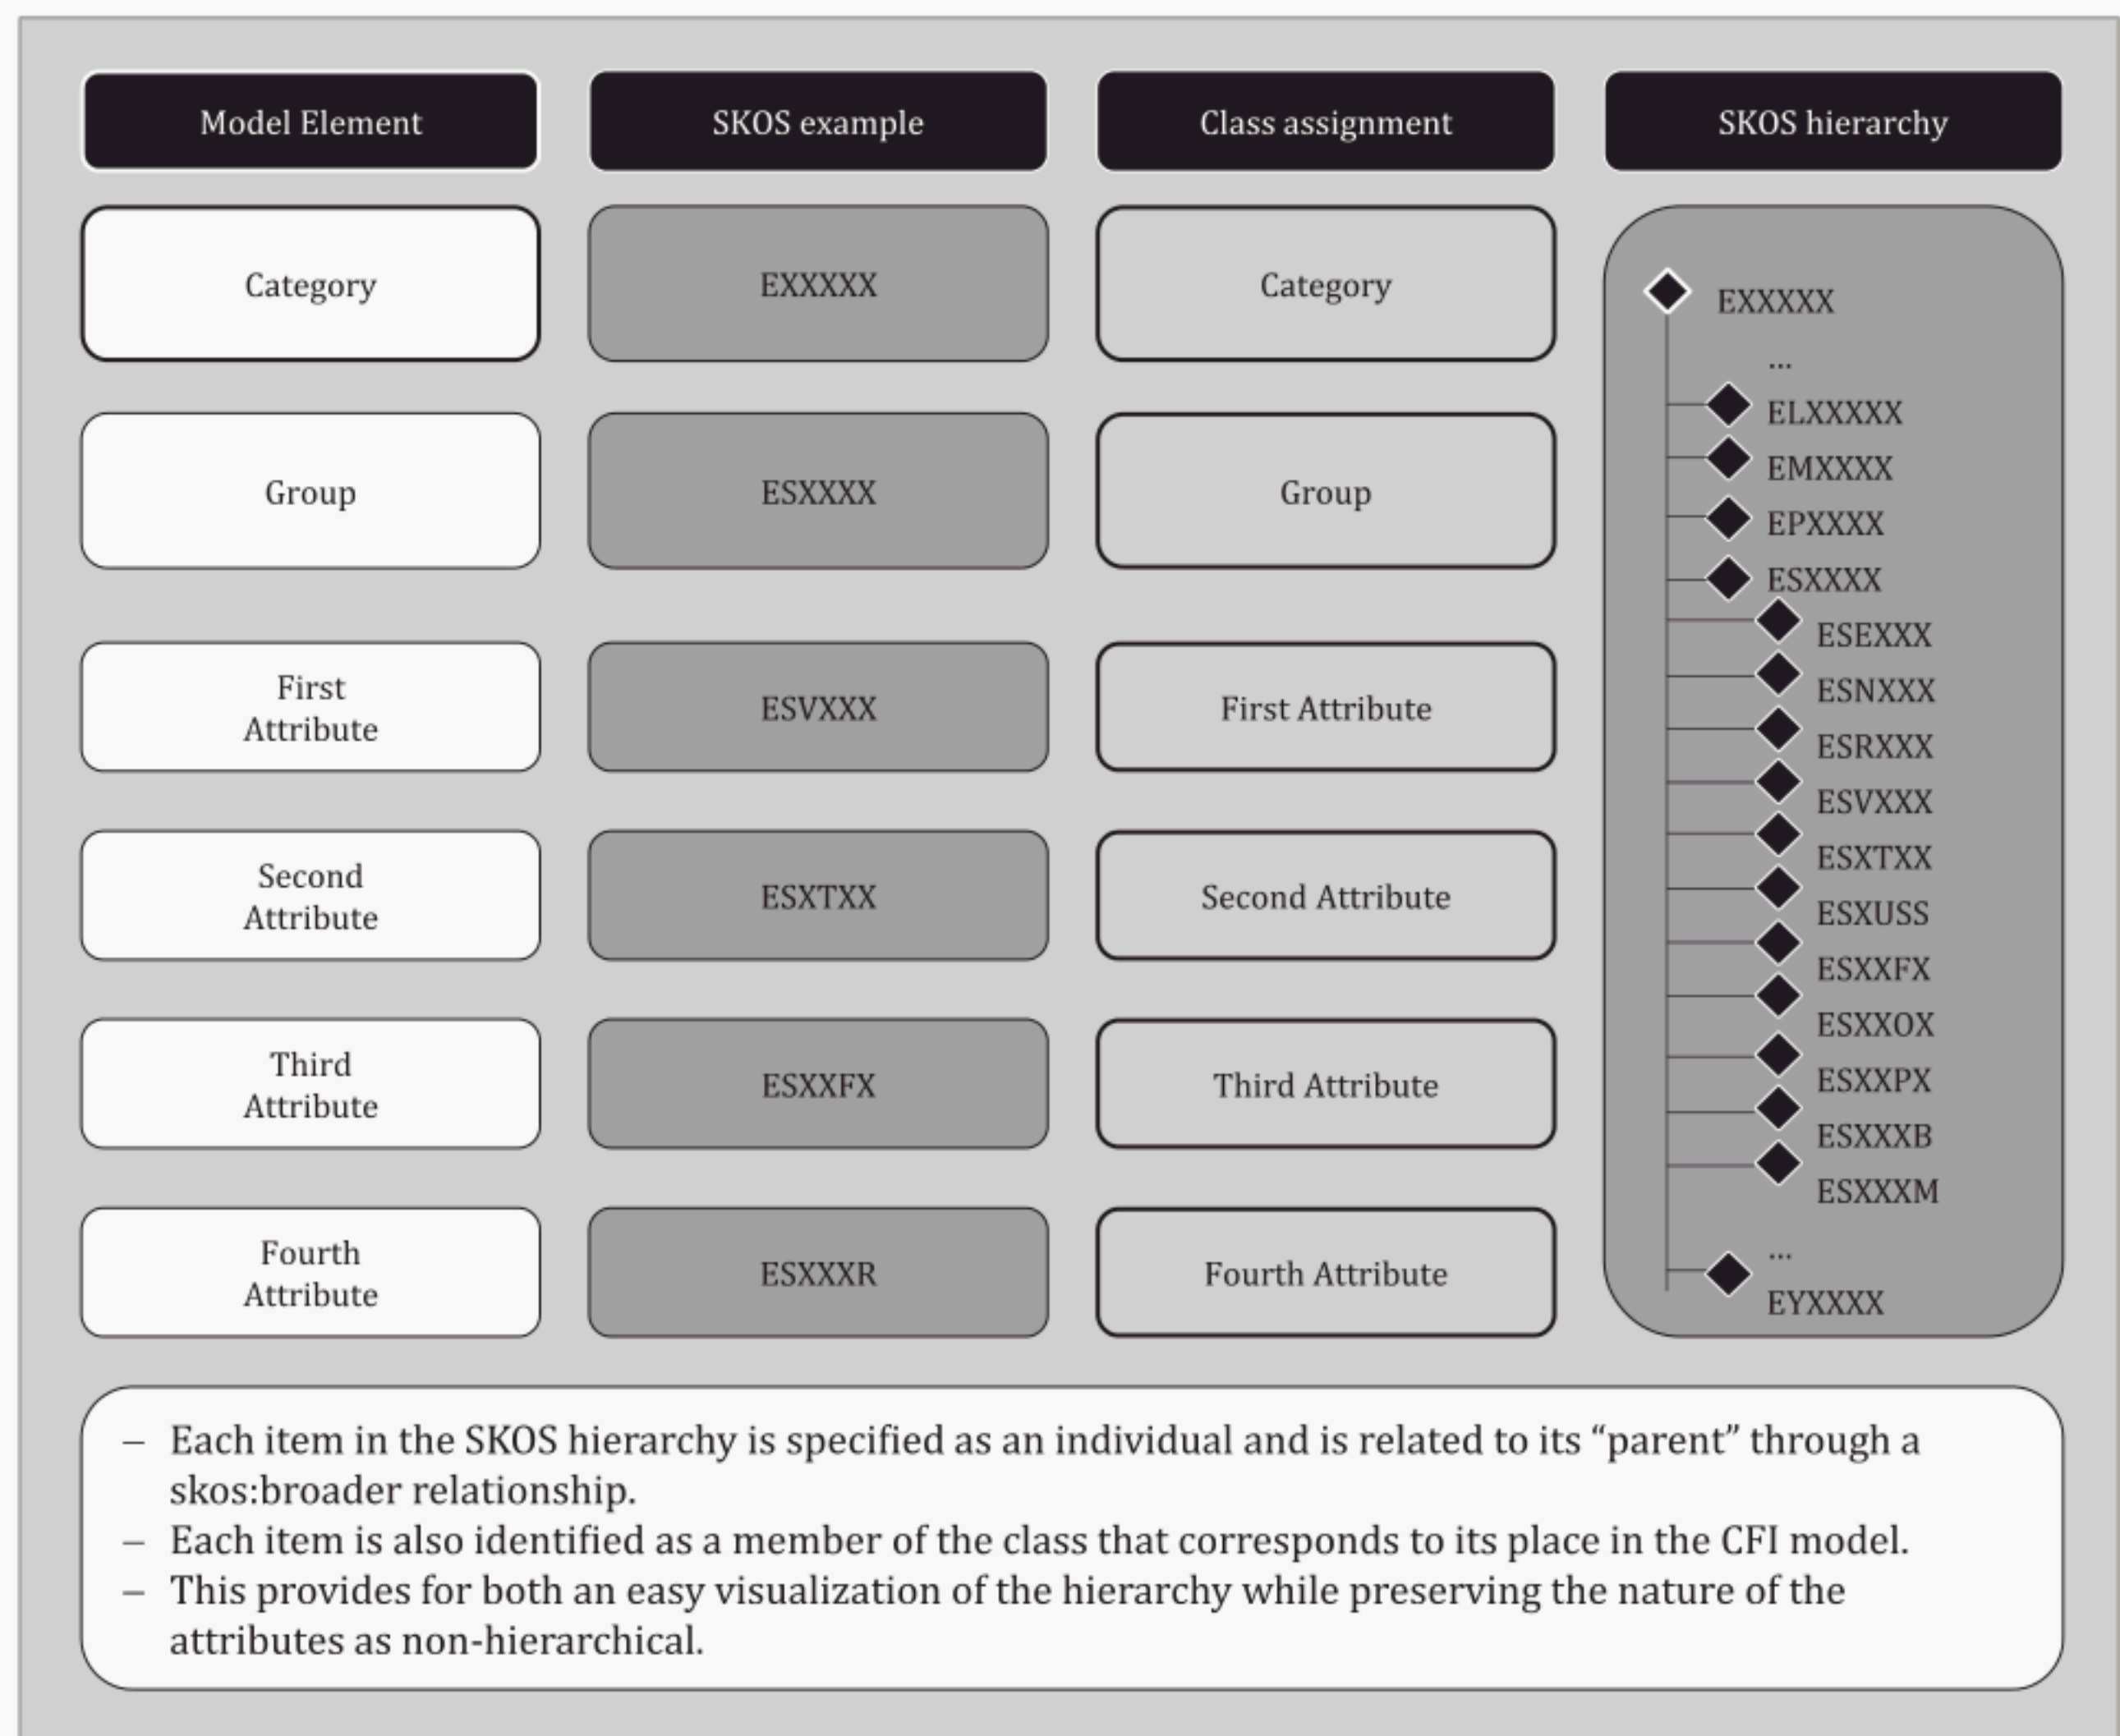

Figure 3 — CFI relationship model

Note that the attributes (First Attribute, Second Attribute, Third Attribute, Fourth Attribute) do not stand in a hierarchical relationship to each other in any instance. Rather, they are all specified as having the appropriate individual that is a member of the class “Group” as the skos:broader “parent”. This is deliberate, as the attribute-level individuals are not semantically related in the actual CFI code strings. This further has the consequence that each Attribute is specified within the context of both a Category and a Group.

5 CFI code allocation

5.1 General

CFI codes are assigned following the conventions and principles of [Clause 4](#).

Where an instrument is identified using [ISO 6166](#), the relevant ISIN allocation agency will also assign the CFI code. This CFI code will always be considered as the official CFI code.

For those instruments where no ISIN is assigned, the CFI code may be derived by a user in accordance with this document, the external code list and any recommendations or guidelines published by the maintenance agency.

CFI codes shall be assigned in a timely manner in order to meet the needs of the user community.

Annex A
(informative)

Classification examples

CFI Code: **E S V U F R**

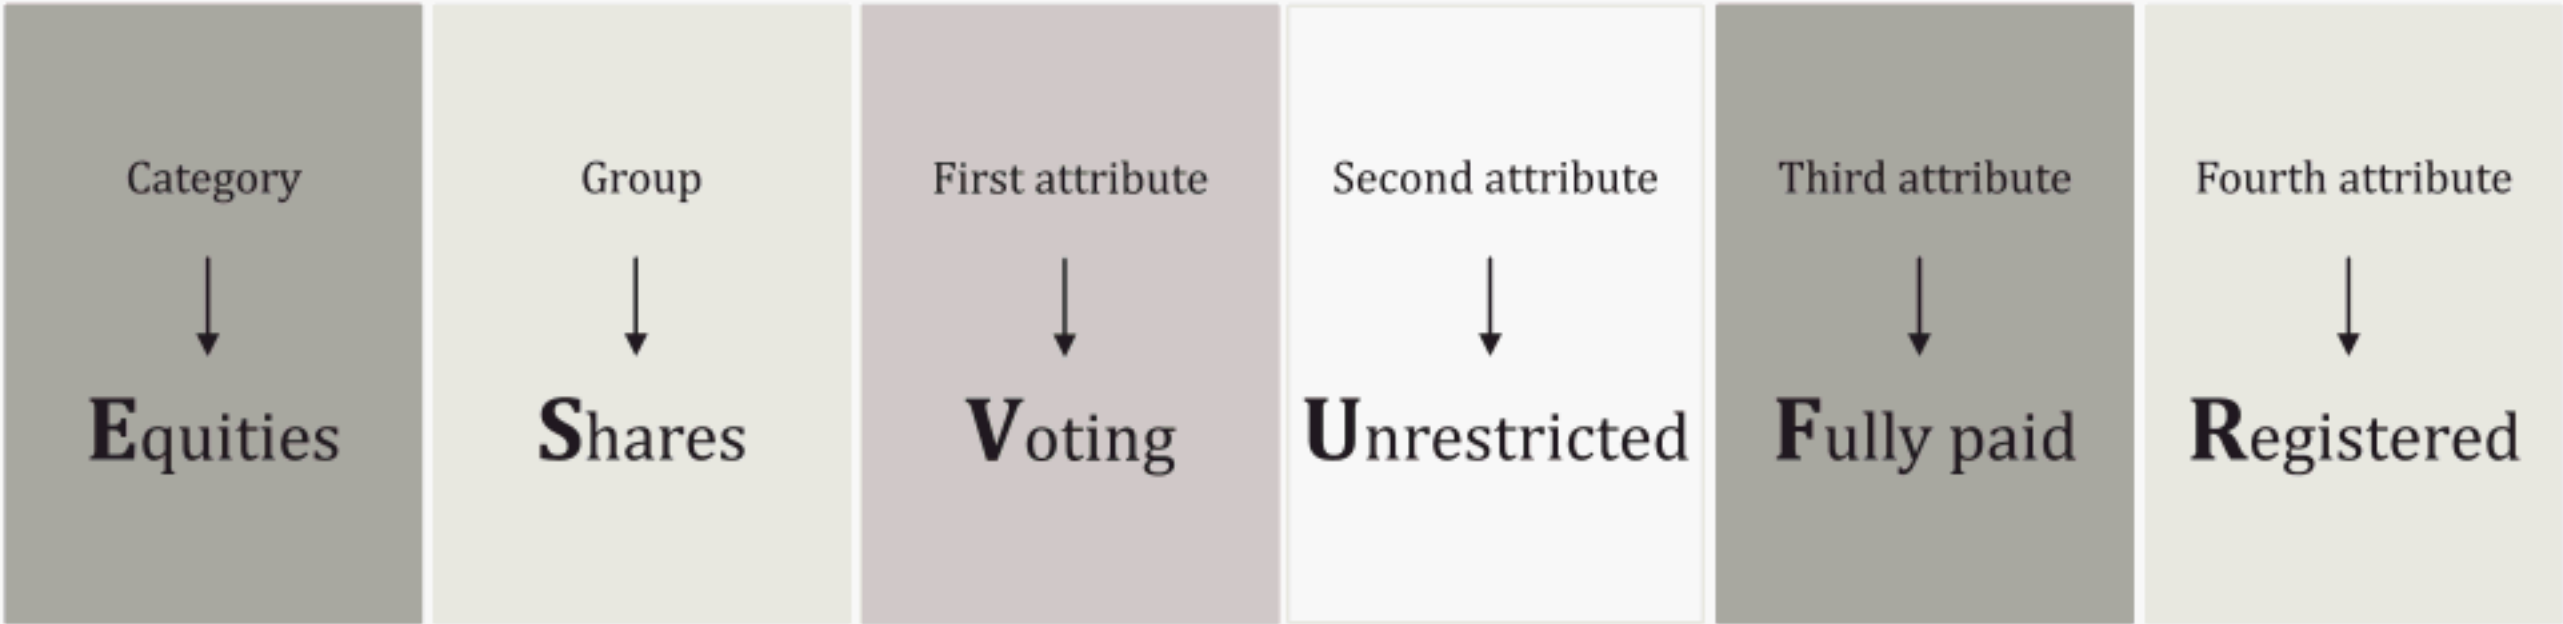

Figure A.1 — Coding of the CFI code

The CFI code **ESVUFR** (see [Figure A.1](#)) can be used for multiple equity securities from various issuers. An example of one financial instrument associated with this CFI code example is provided in [Table A.1](#).

Table A.1 — Example of ISIN mapped to CFI code

Category or group	ISIN	CFI		Issuer or description
Equities or common or ordinary shares	US4592001014	ESVUFR		International Business Machines (IBM)
		E	Equities	
		S	Common or ordinary shares	
		V	Voting	
		U	Free (unrestricted)	
		F	Fully paid	
		R	Registered

British Standards Institution (BSI)

BSI is the national body responsible for preparing British Standards and other standards-related publications, information and services.

BSI is incorporated by Royal Charter. British Standards and other standardization products are published by BSI Standards Limited.

About us

We bring together business, industry, government, consumers, innovators and others to shape their combined experience and expertise into standards-based solutions.

The knowledge embodied in our standards has been carefully assembled in a dependable format and refined through our open consultation process. Organizations of all sizes and across all sectors choose standards to help them achieve their goals.

Information on standards

We can provide you with the knowledge that your organization needs to succeed. Find out more about British Standards by visiting our website at bsigroup.com/standards or contacting our Customer Services team or Knowledge Centre.

Buying standards

You can buy and download PDF versions of BSI publications, including British and adopted European and international standards, through our website at bsigroup.com/shop, where hard copies can also be purchased.

If you need international and foreign standards from other Standards Development Organizations, hard copies can be ordered from our Customer Services team.

Copyright in BSI publications

All the content in BSI publications, including British Standards, is the property of and copyrighted by BSI or some person or entity that owns copyright in the information used (such as the international standardization bodies) and has formally licensed such information to BSI for commercial publication and use.

Save for the provisions below, you may not transfer, share or disseminate any portion of the standard to any other person. You may not adapt, distribute, commercially exploit or publicly display the standard or any portion thereof in any manner whatsoever without BSI's prior written consent.

Storing and using standards

Standards purchased in soft copy format:

- A British Standard purchased in soft copy format is licensed to a sole named user for personal or internal company use only.
- The standard may be stored on more than one device provided that it is accessible by the sole named user only and that only one copy is accessed at any one time.
- A single paper copy may be printed for personal or internal company use only.

Standards purchased in hard copy format:

- A British Standard purchased in hard copy format is for personal or internal company use only.
- It may not be further reproduced – in any format – to create an additional copy. This includes scanning of the document.

If you need more than one copy of the document, or if you wish to share the document on an internal network, you can save money by choosing a subscription product (see 'Subscriptions').

Reproducing extracts

For permission to reproduce content from BSI publications contact the BSI Copyright and Licensing team.

Subscriptions

Our range of subscription services are designed to make using standards easier for you. For further information on our subscription products go to bsigroup.com/subscriptions.

With **British Standards Online (BSOL)** you'll have instant access to over 55,000 British and adopted European and international standards from your desktop. It's available 24/7 and is refreshed daily so you'll always be up to date.

You can keep in touch with standards developments and receive substantial discounts on the purchase price of standards, both in single copy and subscription format, by becoming a **BSI Subscribing Member**.

PLUS is an updating service exclusive to BSI Subscribing Members. You will automatically receive the latest hard copy of your standards when they're revised or replaced.

To find out more about becoming a BSI Subscribing Member and the benefits of membership, please visit bsigroup.com/shop.

With a **Multi-User Network Licence (MUNL)** you are able to host standards publications on your intranet. Licences can cover as few or as many users as you wish. With updates supplied as soon as they're available, you can be sure your documentation is current. For further information, email cservices@bsigroup.com.

Revisions

Our British Standards and other publications are updated by amendment or revision.

We continually improve the quality of our products and services to benefit your business. If you find an inaccuracy or ambiguity within a British Standard or other BSI publication please inform the Knowledge Centre.
